

I am opposed to IBOC because from what I've heard it will reduce an AM's station's audio to no more than a telephone. Plus, Canada and other countries are placing their digital broadcasting in the L Band (1.452-1.492 GHz) which is allocated worldwide for broadcasting, not the military which uses the spectrum in America. Plus, analog AM Stereo gives AM a frequency response up to 10kHz which is far superior to digital IBOC.
